

Settings

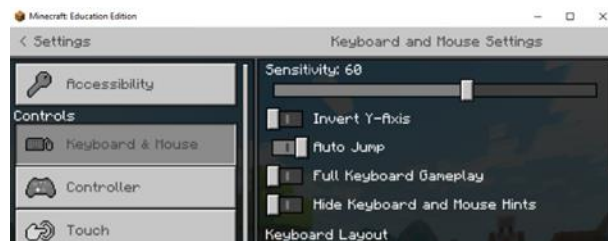

World Settings allow you to customize the game for yourself. They are valuable in helping you learn to play as well. Let's change a few Settings to help us get started and make our world a little easy to work within.

Steps:

1. Select **Settings**

2. Select **Keyboard and Mouse Hints**.

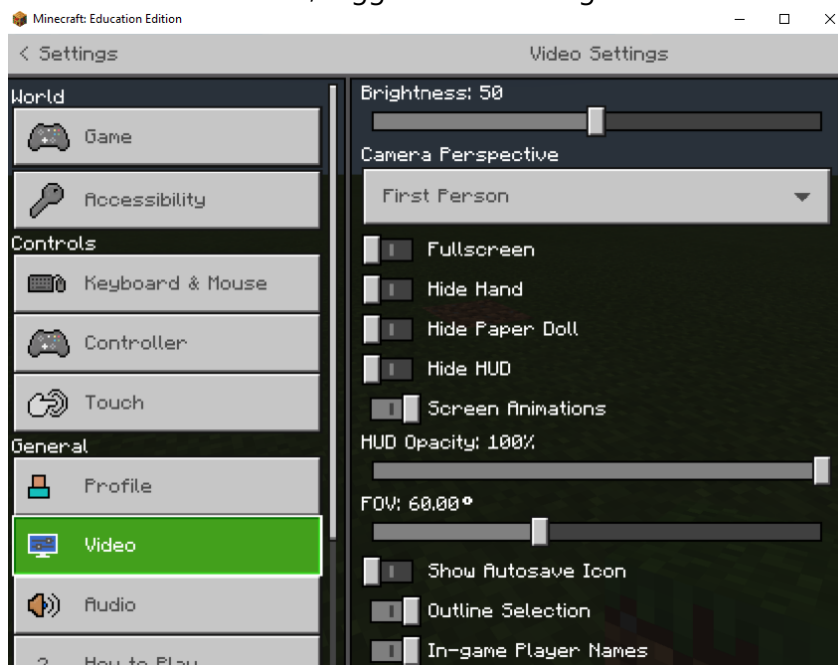

- **Sensitivity.** The sensitivity slide can be moved to the left to slow down the speed the player builds. This will help when you learn to place and break. Taking the sensitivity to 15 or below helps you not dig holes.
- **Hide Keyboard and Mouse Hints.** Make sure the toggle is on the left. If it is on the right, that means it is on and will hide the mouse hints. Beginners typically want the hints left on their screen.

3. **Select Video** settings.

- a. You can adjust the brightness of the game.
- b. Scroll down the right side and locate View Bobbing.

- i. The Avatar in game bounces as they walk. Turning this off may be helpful to adjust for students/participants who are sensitive to motion. If you are sensitive to motion, toggle View Bobbing to the left.

- 4. Select **Audio** settings to control sound. There is a Music control and a Sound control. The music will control the background game music and the sound will control the player and animal sounds. Set these as you would like.
